My research interests are focused on ocean physics with linkage and applications for societal needs, especially: the response of the ocean in the dynamic of climate change through air-sea interaction from regional to global scales, freshwater plumes dynamics (Rivers, sea-ice melting and precipitation), thermohaline stratification of the upper ocean layers, the role of stratification on the sea surface temperature conditions, the contribution of temperature and salinity on sea level changes and ocean heat content variations, from regional to global scales. I am used to In situ and remote sensing observations, with the combined of numerical model simulation output.
